2. Citations and explanations

The invention relates to a safety box/ combustion container mainly for contagious surgical waste material.

It is intended to create secure safekeeping of contaminated hospital waste products.

The solution is a safety box made of laminated, flat paper/cardboard material folded along pressed folding lines, water repellant on the outer surface and liquid absorbing on the inside, combustable and provided with a slit on one of its longer sides being closed with a flap and also provided with an opening at the top of the box.

The following documents were referred to in the International Search Report:

- (1) US 4674676
- (2) US 5039004
- (3) US 4452358
- (4) EP 328416

(1) refers to a fold up container of cardboard for used medical materials with an opening at the top.

(2) refers to a medical appliance disposal container made from a blank of foldable material of laminated layers of wood pulp fiberboard with one side being water repellant.

(3) refers to a medical appliance disposal container with openings with any suitable shape to receive particular medical appliances.

(4) refers to a container made from a blank of foldable material for the incineration of disposable articles, which container provides a slit on one of its longer sides being closed with a flap.

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: V.

The invention differs from the cited prior art in that the inside of the container is water absorbant. However, it appears obvious for a person skilled in the art to configurate a container in this manner.

Thus, the invention claimed in claim 1 is novel but does not fulfil the criteria of inventive step. The industrial applicability of the invention is obvious.
